

Washington, D.C. – Congressman Charlie Wilson (OH-6) issued the following statement on Congress' attempt to override the President's misguided veto of the Intelligence Authorization Conference Report:

“For the first time in three years Congress passed an intelligence authorization bill to give our intelligence community the support and guidance it needs. While the total amount appropriated is classified, this bill authorized the largest single increase intelligence funding in the history of the United States...”

Washington, D.C. – Congressman Charlie Wilson (OH-6) issued the following statement on Congress' attempt to override the President's misguided veto of the Intelligence Authorization Conference Report:

“For the first time in three years Congress passed an intelligence authorization bill to give our intelligence community the support and guidance it needs. While the total amount appropriated is classified, this bill authorized the largest single increase intelligence funding in the history of the United States. While authorizing extra funding, we made sure to include a provision that requires U.S. intelligence agencies and personnel to abide by the prohibitions on torture found in the Army Field Manual. That manual currently prohibits waterboarding and other torture, and it was developed by studying which interrogation techniques are truly effective.

I was sorry to see the president veto the authorization bill because he believes that waterboarding should be used in interrogations. I supported Congress' attempt to override his veto and was disappointed when the attempt failed. I look forward to working on a piece of legislation that will both support our intelligence community and maintain our moral standing.

The president and other Republicans can play politics with American safety and claim Democrats are the ones putting Americans at risk. I'm confident Americans won't be hoodwinked. Rest assured, Congress is working hard to do the right thing: keep America safe while preserving true American values.”
